

Veraset-Harvard End User License Agreement

Site License | July 1, 2025 – June 30, 2026

Purpose

This document serves as an End User License Agreement (EULA) for all Harvard users that intend to access Veraset Movement data. Harvard users accessing the Veraset Movement data under Harvard's site license must agree to the following terms for the use of data. All team members that will gain access to the Veraset data must sign this agreement and attach it to the Protocol Team Members section of an approved Data Safety submission before access will be granted.

Data Overview

- Dataset: Veraset Movement (Jan 1, 2019 – Dec 31, 2024)
- Schema: CAID, utc_timestamp, horizontal_accuracy, id_type, ip_address, latitude, longitude, iso_country_code, quality_fields (for data after 2023), geo_fields (for data after 2023)
- Delivery: Globus, after approved Data Safety

Permitted Uses and Users

- To be used for Harvard academic research & teaching only
- To be used only by **Harvard affiliates on systems restricted to Harvard affiliates that meet Security Standards listed below**, unless Harvard has written permission from Veraset to share with external collaborators for a specific project. Email research@hks.harvard.edu for support if you would like to request access for external collaborators.
- Association to a DAT and appropriate affiliation to Harvard is required for access to Veraset data, inclusive of Harvard Library digital access privileges.

Restricted Uses

- Do NOT share, sublicense, or resell raw Veraset data
- Do NOT use data to identify individuals or use Veraset data for any targeting or advertising to individuals
- Do NOT use Veraset data to associate individuals with visits to any of the below. If you are working with visits to any of these areas, have questions, or need clarification, please email research@hks.harvard.edu for clarity.
 - health care point of interest (including without limitation, doctors, hospitals, mental health professionals, physical therapy, treatment centers, care facilities, etc.)
 - substance abuse treatment center
 - place associated with the exercise of reproductive rights (such as an abortion clinic or Planned Parenthood location)
 - places of worship
 - elementary or secondary schools
 - government buildings, or
 - points of interest associated with the LGBTQ+ community

Data Salting & Security Standards

- ~0.05% of Veraset data is salted to fingerprint the Veraset data provided to Harvard and detect misuse (such as prohibited sharing of Veraset data).
- Veraset data must be:
 - encrypted at rest and protected when in transit (see Q&A for more information)
 - stored behind a firewall with no public access
 - former employees, teachers, researchers, and students cannot have access to Veraset data
 - managed under a least privileges access policy. In practice what that requires is that no one other than current Harvard affiliates with a need to use the data can have access to the Veraset data and all Harvard affiliates with access to Veraset data must have signed an Veraset-Harvard EULA and be listed on an active, approved Data Safety.
 - password protected and passwords are rotated on a regular basis or similar protection approved by a Data Safety reviewer
 - cannot be stored on personal devices (see Q&A for more information)
 - is classified and managed, at a minimum, at Harvard data security level 3 plus additional Security Standards listed in this EULA
 - PI and Data Safety reviewer must perform regular reviews to confirm that the above standards are met

Publication of Research Results

- Aggregated or derived data/research results may be published in works such as academic journals, books, and online publications, unpublished working papers, and reports, materials and information included in presentations for academic seminars and conferences .
 - Raw Veraset data cannot be published, even de minimis excerpts, without written permission from Veraset.
- **Citation Restrictions for Referring to Veraset By Name:** Prior to publication, Harvard must submit the draft to Veraset for review for approval to use the Veraset name as the source of data in the publication. **Veraset must not be named in any publication without explicit written approval.** If Veraset does not give permission to be named/publicly recognized as the source of the data, any reference to Veraset should be “Mobility Data Partner,” or something substantially similar. If required, Harvard and Harvard affiliates may disclose Veraset’s name to relevant members of any peer review committee. Authors can cite “Mobility Data Partner,” or something substantially similar without Veraset approval.
 - Email research@hks.harvard.edu to support this approval process.

Data Retention and Deletion

- A researcher or research team at Harvard can initiate a project while the Veraset-Harvard MSA is active. The project start date is when a Data Safety application is approved. Once the MSA expires, no new projects can be initiated.
- A researcher or research team must submit a Data Safety application for every research project that uses Veraset data (even within a single research team/program). An approved Data Safety for a

Site License | July 1, 2025 – June 30, 2026

project does not enable or authorize a researcher or research team to begin a new project using the Veraset data without an approved Data Safety application. This is the case even when the new project is a derivative of or closely related to an existing project with an approved Data Safety.

- Veraset data may be used for up to five years from the moment the MSA expires provided the project start date is (a) within a period that the Veraset-Harvard MSA was active and (b) to maintain compliance with Harvard University's retention policy and/or publishing requirements.
- Harvard researchers may retain a copy of their analysis of the Veraset data, including Veraset data, per policy and/or publishing requirements.

Audits and Assessment of Use

- Veraset reserves the right to audit use of Veraset data at Harvard.
- Basic information provided in the Data Safety system (aka DAT system, e.g., project name, abstract) may be used for funder reporting and to respond to reasonable requests from the data provider. Our team may contact the PI and Project Manager listed on the DAT for additional information as needed for these purposes and to provide voluntary opportunities to build a community of researchers using this data. If your project has particularly sensitivities, please contact research@hks.harvard.edu

Q&A

Q: Can I use Harvard Google Drive on Harvard laptop to work with Veraset data?

A: Yes

Q: Can I store Veraset data on a portable/thumb drive?

A: No, even if the portable/thumb drive is encrypted and connected to a Harvard laptop.

Q: Can I store and process Veraset data on non-Harvard computing equipment (e.g. server, desktop, laptop, tablet, cellphone, etc.)?

A: No, this is absolutely prohibited.

Q: Can I store and process Veraset data on personal devices?

A: No, this is absolutely prohibited. Veraset data has to be stored and processed on Harvard equipment and systems.

Q: What does "protected in transit" mean for transferring from NESE (via Globus) to FASSE or Harvard Google Drive?

A: Protected in transit means encrypted if encryption is possible. Normally, the transfer from NESE to FASSE or Harvard Google Drive via Globus would be encrypted by default and therefore users would not need to take additional steps to comply with this requirement.
